

LAB TECHNICIAN

(Ref. 2606 - CELIÀ)

OFFER: The Cancer Cell States & Metastasis Immunity Lab at the Hospital del Mar Research Institute, Barcelona led by Dr. Toni Celià-Terrassa is seeking a highly motivated and talented postdoctoral researcher.

<https://celiaterassalab.com/>

Join the Celià-Terrassa Lab (<https://celiaterassalab.com/>) to investigate the mechanisms underlying cancer metastasis and develop novel therapeutic strategies to target immune-evasive tumor cell states. You will work on cutting-edge projects involving tumor biology, immunology, advanced imaging, and in vivo preclinical models. PLASTWIRE is an ERC-funded project aimed at understanding and therapeutically re-wiring immune-evasive cancer cell states.

TASKS

- Provide technical support for research focused on cancer metastasis, tumor immunology, and cellular plasticity.
- Support in vivo preclinical studies, including animal handling, colony management, experimental procedures, and sample collection.
- Acquire and analyze images using advanced microscopy Systems (confocal microscopy and Light Sheet Fluorescence Microscopy)
- Help implement and standardize experimental procedures and ensure compliance with laboratory safety and quality standards.

Candidate Profile

- BSc/MSc in Biology, Biochemistry, Biotechnology or related field
- Experience with animal models and animal handling
- Familiarity with advance microscopy systems and image analysis
- Ability to work independently and in a team

Application Process

Interested candidates should send:

- CV
- Brief statement of interest

Applications should be sent to Toni Celià at acelia@researchmar.net

Deadline for submission of CVs: during September 2026
